

C-7504 Revamping for Kerosene Draw-Off

- ▶ Client: Motor Oil Hellas (MOH), Corinth Refineries S.A., Greece
- ▶ Detailed Engineering design and Procurement assistance Services
- ▶ Kerosene Production Capacity: 40 Mt/h
- ▶ September 2015 – June 2017

MOH C-7504 Revamping for Kerosene draw-off project consists of the addition of a new kerosene / LGO side draw-off from the existing atmospheric distillation column C-7504, and its energy integration into the Unit. Main modifications include the atmospheric distillation section (C-7508 internals revamping), the heat integration (new and revamped equipment) and the stripping section and products cooling (new stripper), along with respective piping and civil works.
